## EXECUTIVE SUMMARY

**Project Proposal.** The proposed Aurora Oaks site is located south of 58<sup>th</sup> Ave SE and east of Kagy Street SE. The proposed project is expected to have a total of up to 180 single-family homes at full buildout. The existing site includes one (1) single-family home which will be removed with the proposed project. The horizon year for full buildout of the proposed project in this Traffic Impact Analysis is 2025.

**Vehicular Access.** Vehicular access is proposed via a new road that will intersect with 58<sup>th</sup> Ave SE.

**Trip Generation.** The project at full buildout is estimated to generate 1,688 net new daily vehicular trips with 125 net new trips (33 entering, 92 exiting) occurring during the weekday AM peak hour and 168 net new trips (105 entering, 63 exiting) occurring during the weekday PM peak hour.

**Level of Service.** Based on scoping comments provided by the City of Lacey and Thurston County, future 2025 PM peak hour LOS analyses were conducted at 18 off-site study intersections to determine traffic impacts of the project buildout. The results of the LOS analyses indicate that 11 of the 18 study intersections are anticipated to operate at LOS D or better during the weekday PM peak hour in 2025 with the proposed Aurora Oaks development. The following intersections are anticipated to operate at LOS E or F:

Intersections located on Strategy Corridors:

The following intersections are located on City of Lacey or Thurston County Strategy Corridors and are therefore exempt from LOS standards.

1. Marvin Rd SE/Steilacoom Rd SE
13. College St SE/Yelm Hwy SE
14. Ruddell Rd SE/Yelm Hwy SE

Intersections with Future Planned Improvements:

The following intersections include future planned improvements that will be completed by the City, County, or other development which are expected to result in acceptable LOS. No mitigation is proposed at these intersections.

3. Marvin Rd SE/Union Mills Rd SE
4. Marvin Rd SE/19<sup>th</sup> Ave SE
9. Marvin Rd SE/Mullen Rd SE
10. Kagy St SE/Mullen Rd SE

**Access Management.** The results of the LOS analyses indicate that all individual movements at the proposed site access location are anticipated to operate at LOS A with minimal queuing during the weekday PM peak hour in 2025. In addition, the new site access intersection onto 58<sup>th</sup> Ave SE is located approximately 550 feet to the east of the existing Kagy St SE/58<sup>th</sup> Ave SE intersection, meeting the City of Lacey's spacing requirement of 330 feet for a collector roadway.

**Traffic Calming.** City development guidelines require that internal traffic calming be incorporated into all developments to control cut-through traffic and reduce speed within the development. Since

the project is only proposing access to 58th Ave SE, cutthrough traffic is not anticipated to be a concern within the proposed Aurora Oaks project. It should also be noted that a non-motorized and emergency access only connection between Aurora Oaks and Waldon Drive SE will be created to allow pedestrians and bicycles access between the two neighborhoods.

**Alternate Modes of Transportation.** Sidewalks are proposed on the internal site roadways and will be included on the south side of 58<sup>th</sup> Ave SE as part of the required frontage improvements. Additionally, a new non-motorized and emergency access only connection between Aurora Oaks and Waldon Drive SE will be created to allow pedestrians and bicycles access between the two neighborhoods.

**Mitigation.** The following measures have been identified to mitigate the transportation impacts of the proposed Aurora Oaks development.

- **Lacey Impact Fees.** To mitigate impacts to City of Lacey roads, payment of a transportation mitigation cost is required. The mitigation cost calculation will be determined by the City of Lacey Transportation Department and based on the number of PM peak hour trips generated by the final unit count affecting the current City TIP project list.
- **Thurston County Impact Fees.** To mitigate impacts to Thurston County roads, payment of a transportation impact fee is required. The transportation impact fee is based on the type of land use and the size of the development. Based on the current *Thurston County 2023 Transportation Impact Fee Rate Schedule*, the County collects \$3,191 per single-family dwelling unit in Central Urban Growth Areas. Impact fees will be based on the final unit count.
- **Level of Service Deficiencies.** Based on the results of the LOS analysis, all study intersections anticipated to operate at LOS E/F are either located on City of Lacey or Thurston County Strategy Corridors or have future planned improvements that are anticipated to result in acceptable LOS. Therefore, no mitigation is proposed at these intersections.

## INTRODUCTION

This Traffic Impact Analysis (TIA) for the Aurora Oaks development was prepared consistent with City of Lacey TIA guidelines. Section 4B.035 of the City of Lacey Development Guidelines and Public Works Standards, Chapter 4 – Transportation, identifies a standardized format for a TIA. A TIA is a specialized study of impacts a proposed development project will have on the transportation system.

The proposed Aurora Oaks site is located south of 58<sup>th</sup> Ave SE and east of Kagy Street SE. The current project proposal includes up to 180 single-family homes. The existing site consists of one (1) single-family home which will be removed with the proposed project. Vehicular access to/from the project site is proposed via a single new full access driveway on 58<sup>th</sup> Ave SE.

### Traffic Scoping Report

The scope of work for this TIA was established based on the information provided to the City of Lacey and Thurston County in the Traffic Scoping Memo (dated January 27, 2023). Confirmation of scope was received in the County's Traffic Scoping Review letter dated March 9, 2023, and discussed with County staff at the traffic scoping meeting on March 21, 2023. Additionally, an email confirmation of scope from the City of Lacey was received on March 22, 2023.

A total of 18 off-site study intersections were identified for evaluation during weekday PM peak hour conditions. The County Traffic Scoping Review letter is provided in Appendix A.

### Project Approach

To analyze the traffic impacts of the Aurora Oaks development, the following tasks were undertaken consistent with City of Lacey TIA guidelines:

- |                              |                                       |
|------------------------------|---------------------------------------|
| 1. Prospectus                | 7. Traffic Operations                 |
| 2. Existing Conditions       | 8. Access Management                  |
| 3. Development Traffic       | 9. Traffic Calming                    |
| 4. Trip Generation           | 10. Alternate Modes of Transportation |
| 5. Trip Distribution         | 11. Mitigation                        |
| 6. Future Traffic Conditions |                                       |

# TRAFFIC IMPACT ANALYSIS

## 1. Prospectus

- a) The proposed Aurora Oaks site is located south of 58<sup>th</sup> Ave SE and east of Kagy Street SE as shown in [Figure 1](#) vicinity map.
- b) A preliminary site plan concept is provided in [Appendix B](#). Full buildout is anticipated to include one (1) full access driveway on 58<sup>th</sup> Ave SE.
- c) The current project proposal includes up to 180 single-family homes. The existing site consists of one (1) single-family home which will be removed with the proposed project resulting in up to 179 net new single-family homes with the development of the proposed project.
- d) The horizon year for full buildout of the proposed project in this Traffic Impact Analysis is 2025.

**Figure 1:** Project Site Vicinity

## 2. Existing Conditions

- a) The following describes existing transportation conditions in the study area, including an inventory of existing roads, existing traffic volumes, and public transportation services.

**Marvin Road SE** is a north-south arterial with a posted speed limit of 40 mph in the project vicinity. The road has 2-3 lanes north of Mullen Road SE, then widens to 5 lanes north of Pacific Ave SE. There are intermittent curb, gutter, and sidewalks on both sides of the street.

**Mullen Road SE** is an east-west arterial with a posted speed limit of 35 mph. The road has 2 lanes in each direction. Edge conditions include paved shoulders in the vicinity of the proposed project.

**Meridian Road SE** is a north-south arterial with a posted speed limit of 40 mph. The road has 2 lanes in each direction in the project vicinity. Edge conditions include paved shoulders in the vicinity of the proposed project.

**Kagy St SE** is a two-lane north-south collector with a posted speed limit of 35 mph. Edge conditions include gravel shoulders in the vicinity of the proposed project.

**58<sup>th</sup> Ave SE** is a two-lane east-west collector with a posted speed limit of 25-35 mph in the project vicinity. Edge conditions include unpaved shoulders in the vicinity of the proposed project.

- b) Weekday PM peak hour trips from approved pipeline projects were provided by the City of Lacey in March 2023 and are included in this traffic analysis.
- c) The layout and design of the proposed site driveway will take into consideration sight distance, crash potential, and pedestrian conflicts.
- d) Existing PM peak hour traffic counts used in the traffic analysis of the off-site study intersections were collected by All Traffic Data.
- e) The PM peak hour traffic count data sheets for each of the 18 off-site study intersections are provided in Appendix C. The traffic counts were conducted in November 2022 and March 2023.
- f) The study area is shown graphically in Figure 2. Figure 3 illustrates the 2023 existing weekday PM peak hour traffic volumes at the 18 study intersections. The weekday PM peak hour traffic volumes represent the highest hourly volume of vehicles traveling through an intersection during a typical 4:00 to 6:00 PM peak period. Note that a 4 percent annual background growth rate was applied to the counts conducted in 2022 to estimate 2023 existing PM peak hour volumes.
- g) Public transit service in the project vicinity is provided by Intercity Transit. The nearest public transit stops are located at the Marvin Rd SE/Mullen Rd SE intersection which serves Intercity Transit route 67. Route 67 operates along Marvin Rd and Mullen Rd from approximately 6:00 AM to 7:30 PM during weekdays and 9:00 AM to 7:30 PM during weekends with approximately 60-minute headways.

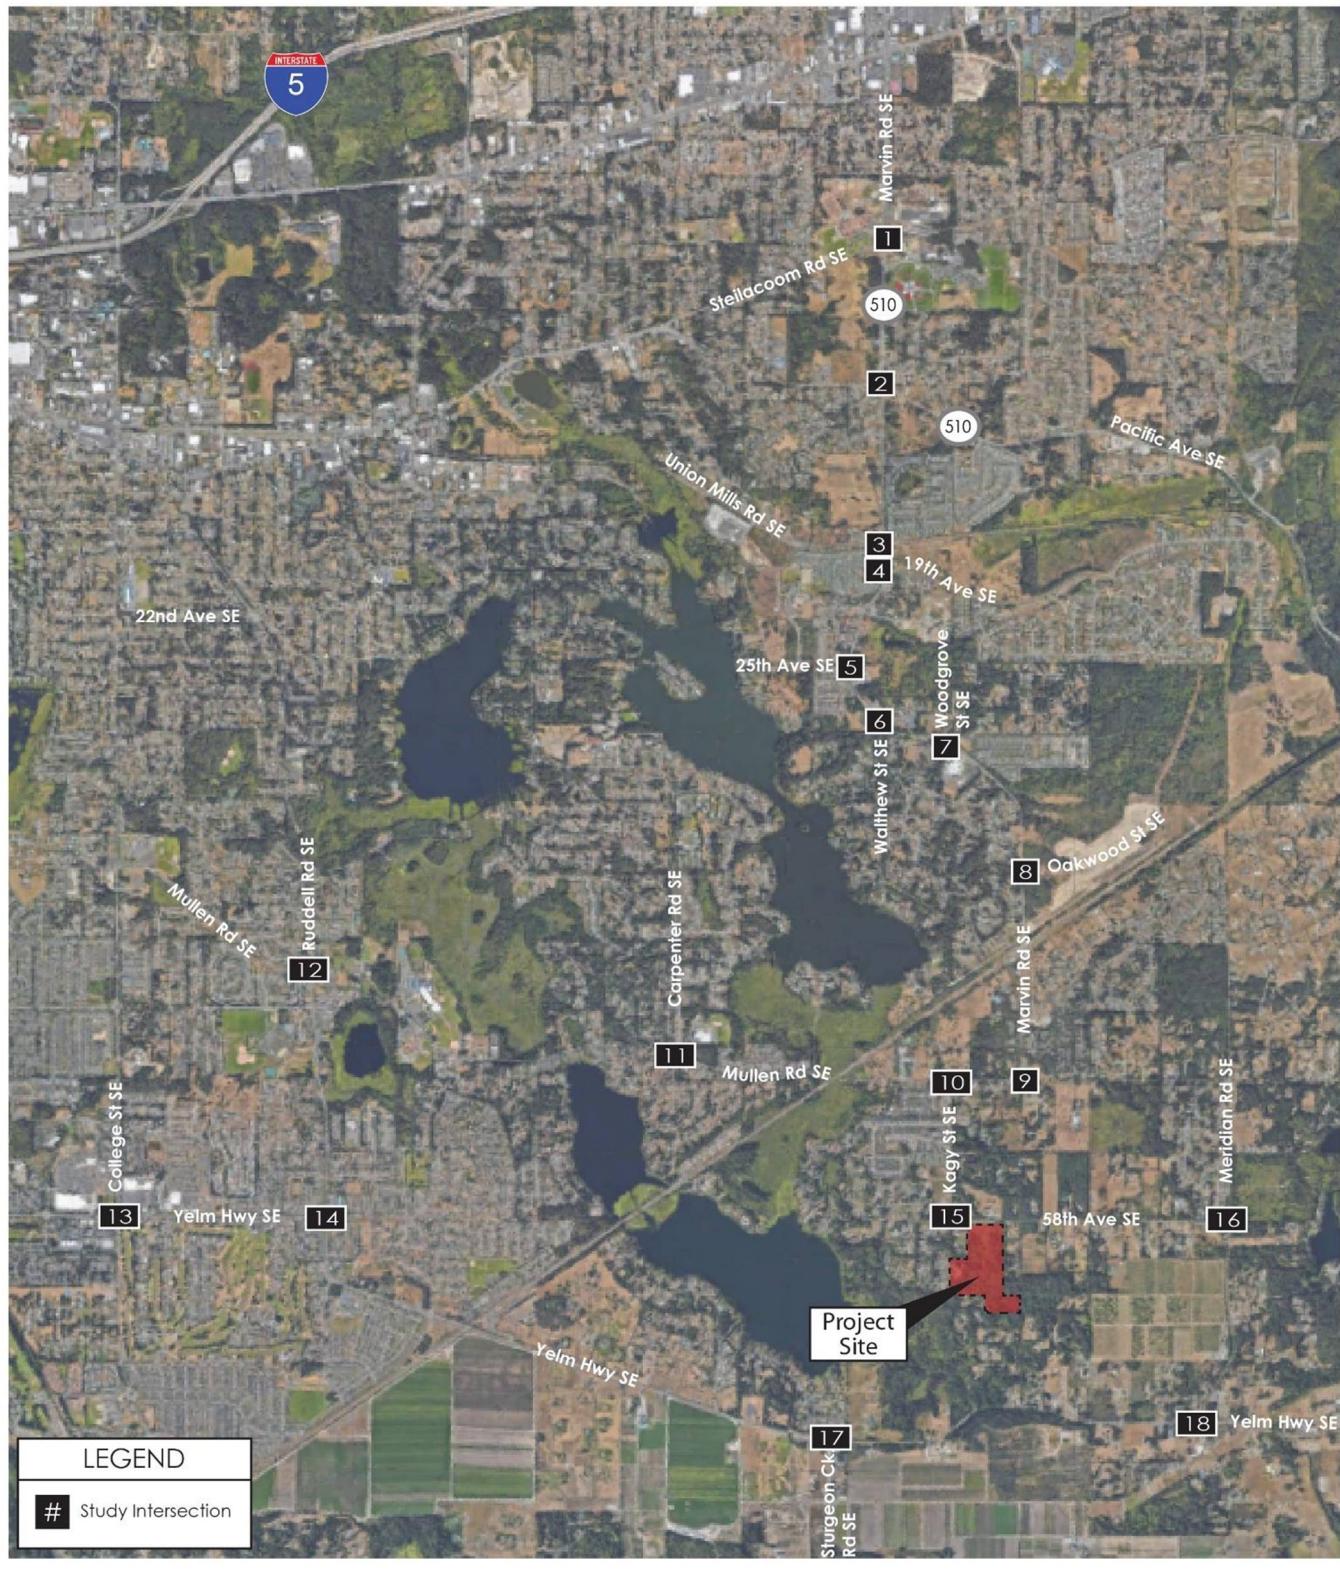

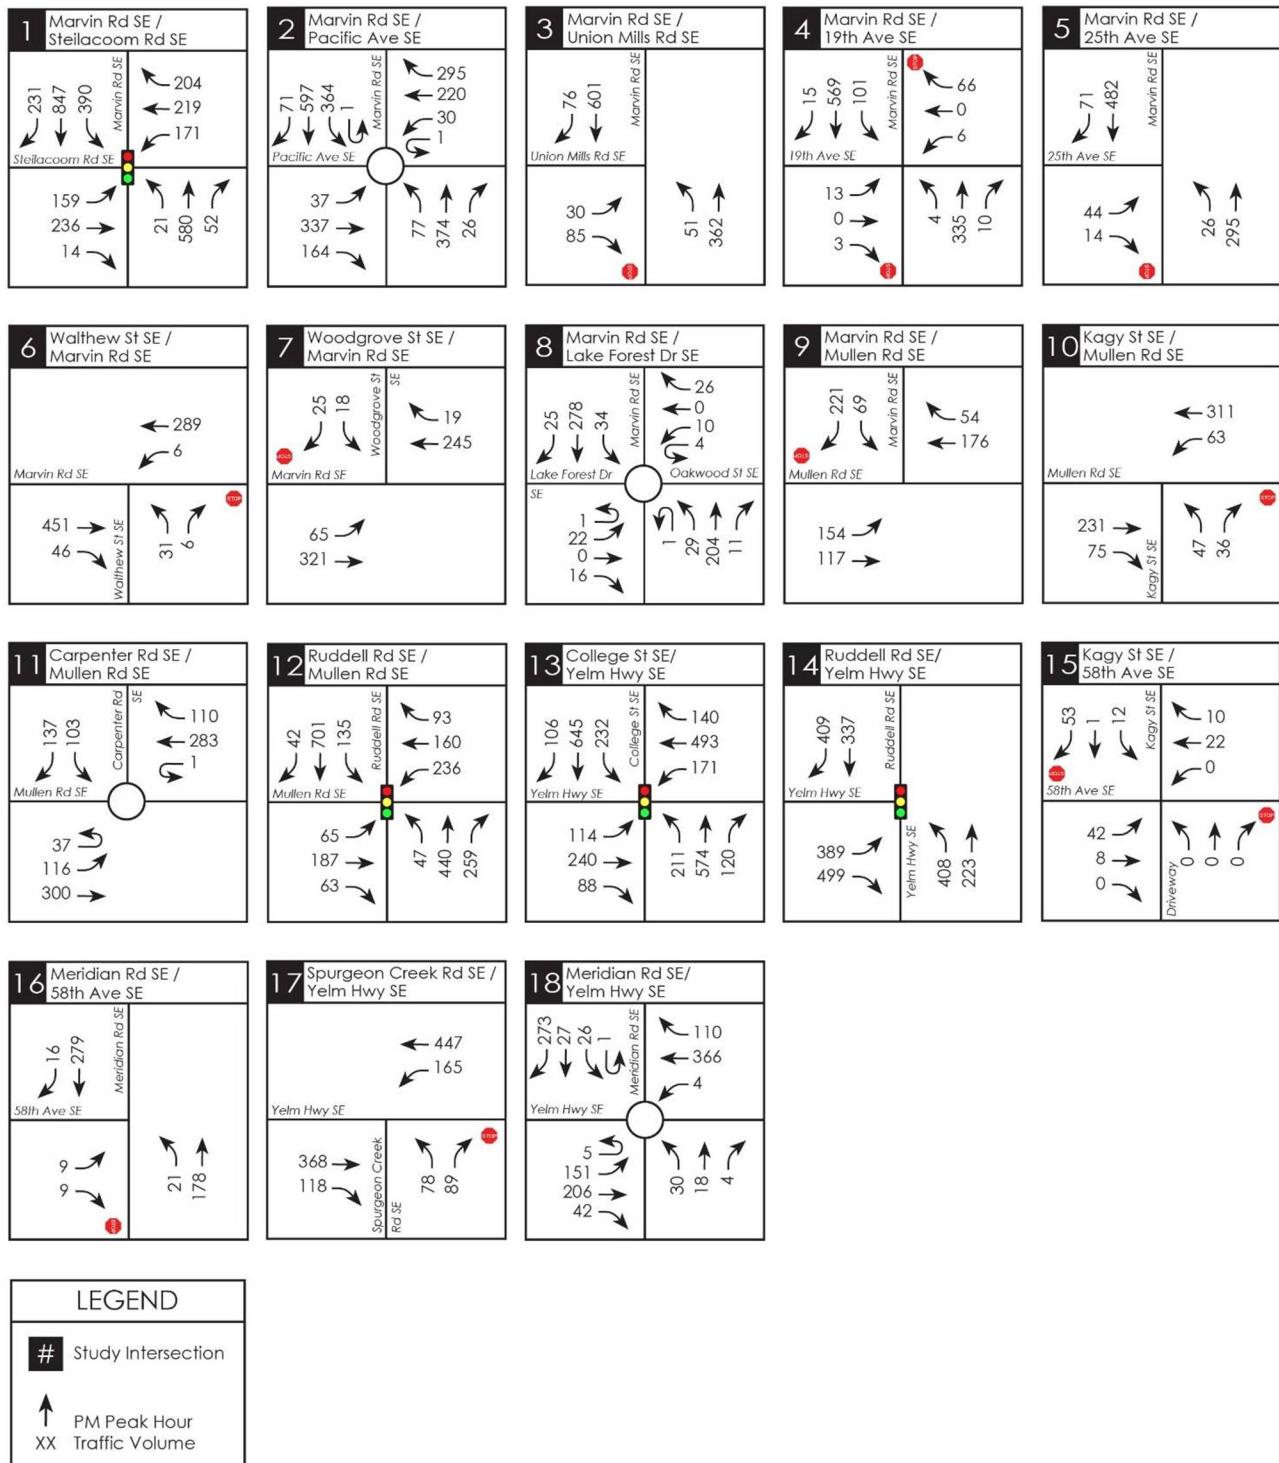

Figure 2: Study Area

**Figure 3:** 2023 Existing Weekday PM Peak Hour Traffic Volumes

### 3. Development Traffic

Based on scoping confirmed by the City of Lacey and Thurston County, the following 18 off-site study intersections were identified for evaluation in this traffic analysis. LOS at each intersection was evaluated during weekday PM peak hour conditions.

1. Marvin Rd SE/Steilacoom Rd SE	Signal
2. Marvin Rd SE/Pacific Ave SE	Roundabout
3. Marvin Rd SE/Union Mills Rd SE	Stop-Controlled
4. Marvin Rd SE/19 <sup>th</sup> Ave SE	Stop-Controlled
5. Marvin Rd SE/25 <sup>th</sup> Ave SE	Stop-Controlled
6. Walthew St SE/Marvin Rd SE	Stop-Controlled
7. Marvin Rd SE/Woodgrove St SE	Stop-Controlled
8. Marvin Rd SE/Lake Forest Dr SE	Roundabout
9. Marvin Rd SE/Mullen Rd SE	Stop-Controlled
10. Kagy St SE/Mullen Rd SE	Stop-Controlled
11. Carpenter Rd SE/Mullen Rd SE	Roundabout
12. Ruddell Rd SE/Mullen Rd SE	Signal
13. College St SE/Yelm Hwy SE	Signal
14. Ruddell Rd SE/Yelm Hwy SE	Signal
15. Kagy St SE/58 <sup>th</sup> Ave SE	Stop-Controlled
16. Meridian Rd SE/58 <sup>th</sup> Ave SE	Stop-Controlled
17. Spurgeon Creek Rd SE/Yelm Hwy	Stop-Controlled
18. Meridian Rd SE/Yelm Hwy	Roundabout

### 4. Project Trip Generation

The weekday daily, AM and PM peak hour trip generation estimates for the proposed Aurora Oaks development were based on trip rates documented in the Institute of Transportation Engineers (ITE) *Trip Generation Manual*, 11<sup>th</sup> Edition. The current project proposal includes a total of up to 180 single-family homes. The existing site consists of one (1) single-family home which will be removed with the proposed project resulting in up to 179 net new single-family homes with the development of the proposed project. Table 1 summarizes the net trip generation. Detailed trip generation calculations are provided in Appendix D.

**Table 1**  
**Trip Generation Summary**

Time Period	Net New Trips Generated		
	In	Out	Total
Weekday Daily	844	844	1,688
Weekday AM Peak Hour	33	92	125
Weekday PM Peak Hour	105	63	168

## 5. Project Trip Distribution

The distribution of Aurora Oaks project trips during the weekday PM peak hour was based on traffic model distribution (SZA 88) as provided by the City of Lacey (included in Appendix E). The weekday PM peak hour assignment of project trips with full project buildout of the Aurora Oaks development is shown at each of the study intersections and the site access location in Figure 4.

## 6. Future Traffic Conditions

Future weekday PM peak hour traffic volumes without the proposed Aurora Oaks development were estimated for future year 2025 conditions without and with project buildout. Future No Action (without project) traffic volumes at the study intersections were developed by applying a four (4) percent annual growth rate to existing PM peak hour traffic counts and including known pipeline project developments. Use of a four (4) percent annual growth rate in addition to the inclusion of pipeline traffic is conservative and would likely result in an overestimation of future traffic volumes.

The future 2025 No Action (without project) weekday PM peak hour traffic volumes are illustrated in Figure 5. Future pipeline project traffic volumes were provided by the City of Lacey.

Adding the project-generated PM peak hour trips (shown in Figure 4) to the 2025 No Action traffic volumes (Figure 5), results in future 2025 With Project traffic volumes, as shown in Figure 6.

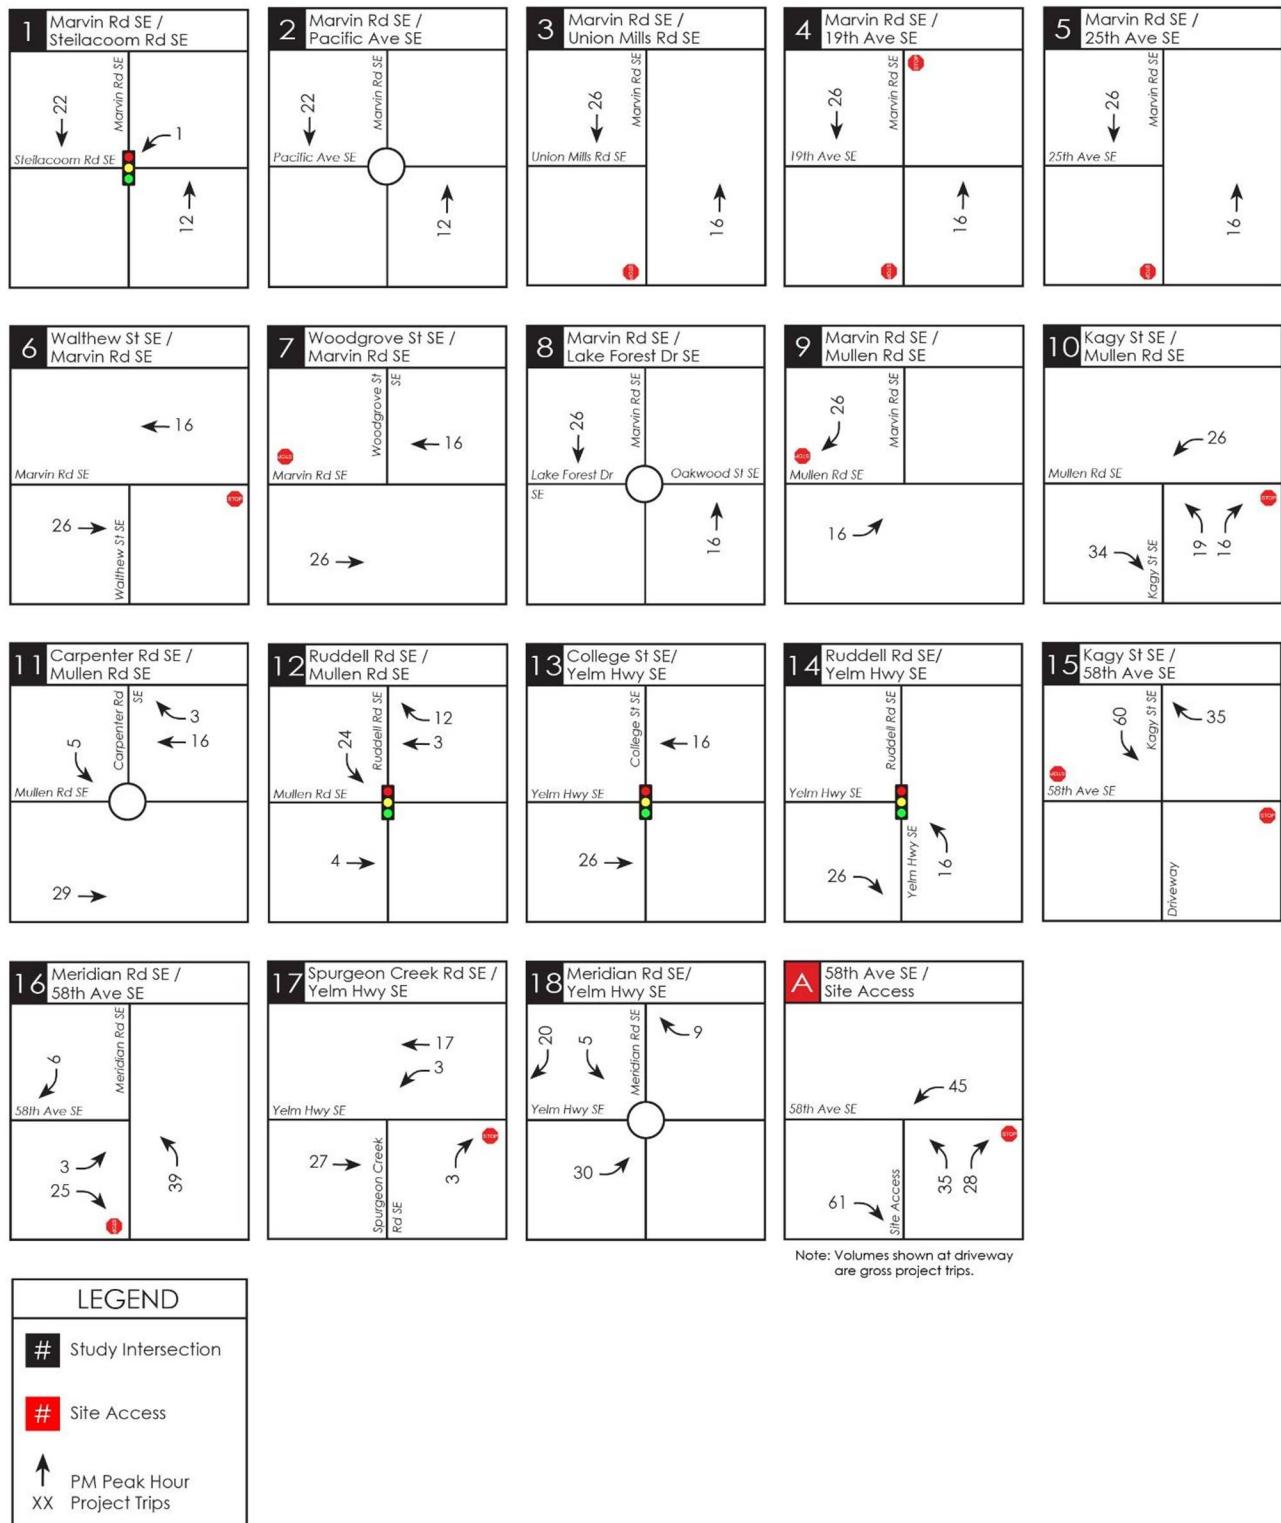

The following documents were reviewed to identify planned improvements in the project vicinity:

- City of Lacey *2023-2028 Transportation Improvement Program (TIP)*
- City of Lacey *2019-2038 Capital Facilities Plan (CFP)*
- City of Lacey *2030 Transportation Plan*
- Thurston County *2023-2028 TIP*
- TRPC *2023-2026 Regional TIP*
- TRPC *Annual Listing of Obligated MPO Projects (CY 2022)*
- WSDOT *2023-2026 Statewide Transportation Improvement Program (STIP)*
- TENW, *Manor House Residential Traffic Impact Analysis*, April 28, 2021
- Manor House Subdivision MDNS, September 24, 2021

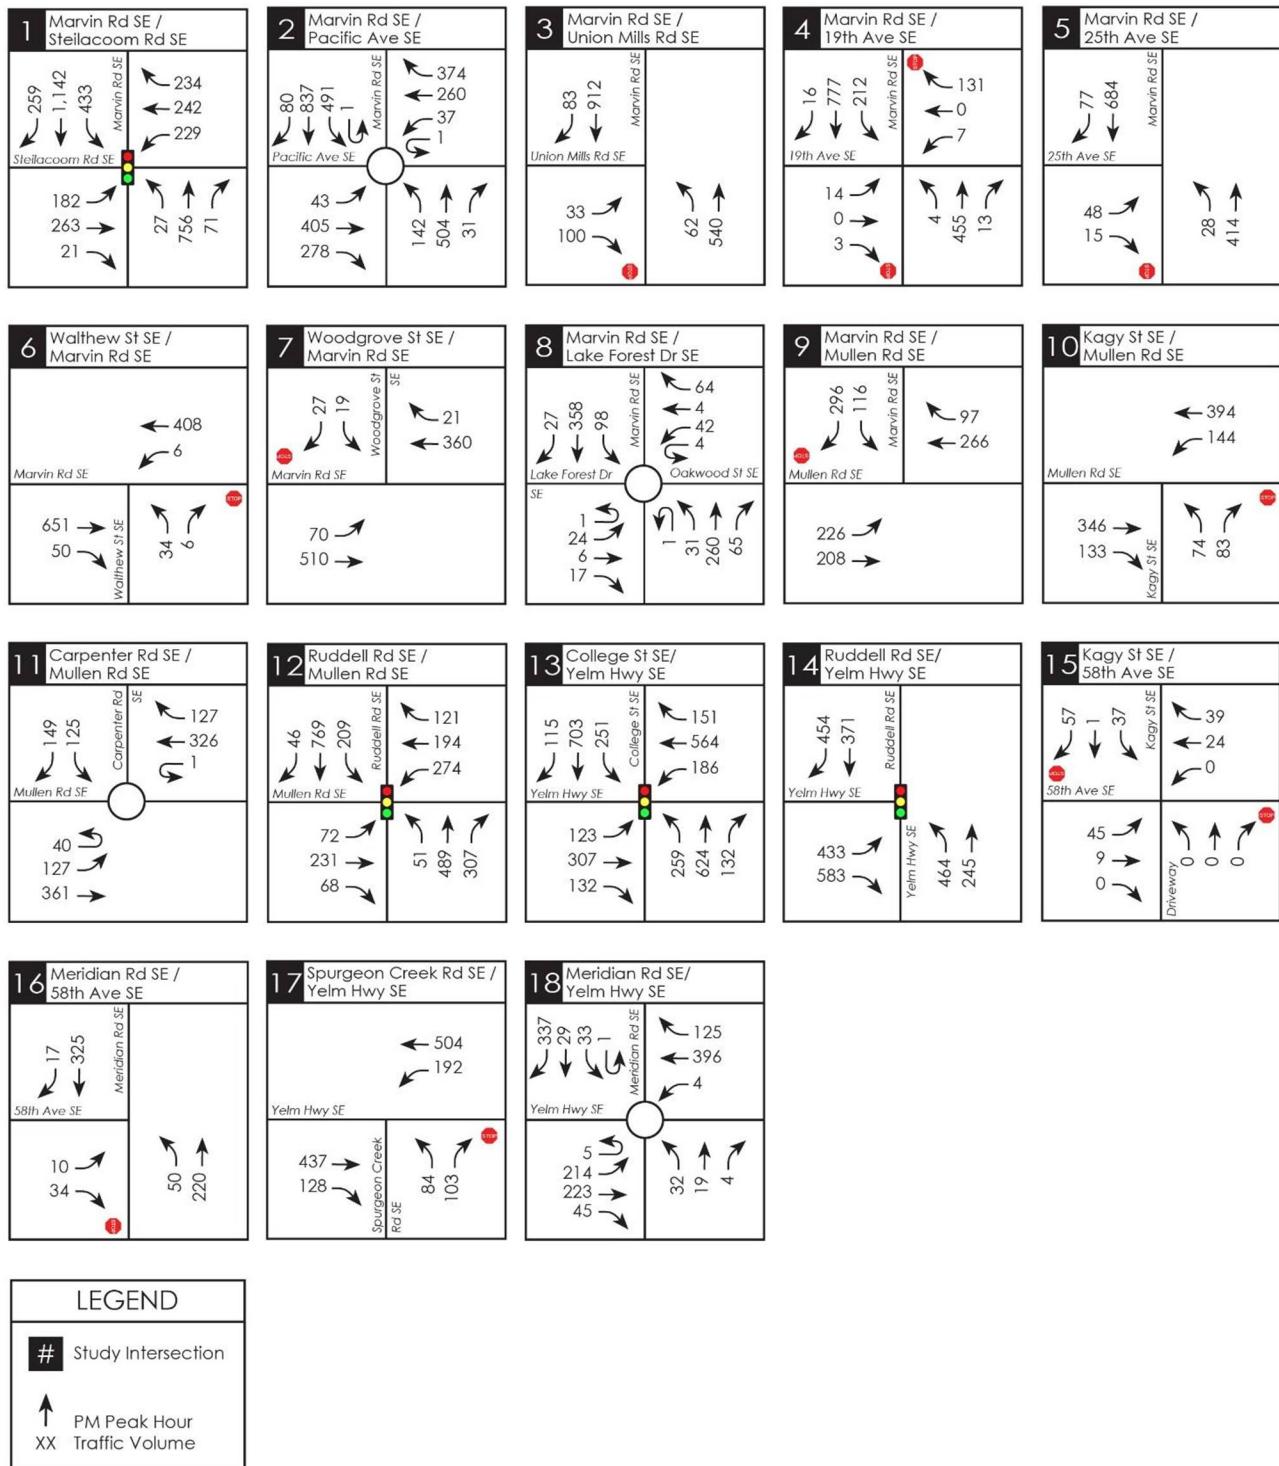

Based on a review of the above planning documents, the following planned improvements were identified in the project vicinity:

- Rainier Rd Improvements (from Yelm Hwy to City Limits): This project is expected to begin in 2025 and will include improvements to tapers and storage lanes at intersections including the study intersection of Yelm Highway SE/College Street SE/Rainier Road SE.
- Yelm Hwy Improvements: This project is expected to begin in 2027 and will widen the eastern side of Yelm Hwy (between Ruddell Rd and the Amtrak Bridge/Compton Blvd) to accommodate an additional northbound lane, a bike lane, sidewalk, and other urban amenities. Future widening of Yelm Hwy from Compton Blvd to the future Marvin Rd Extension is also planned per City of Lacey's *2030 Transportation Plan*; however, a project timeline is currently unknown.

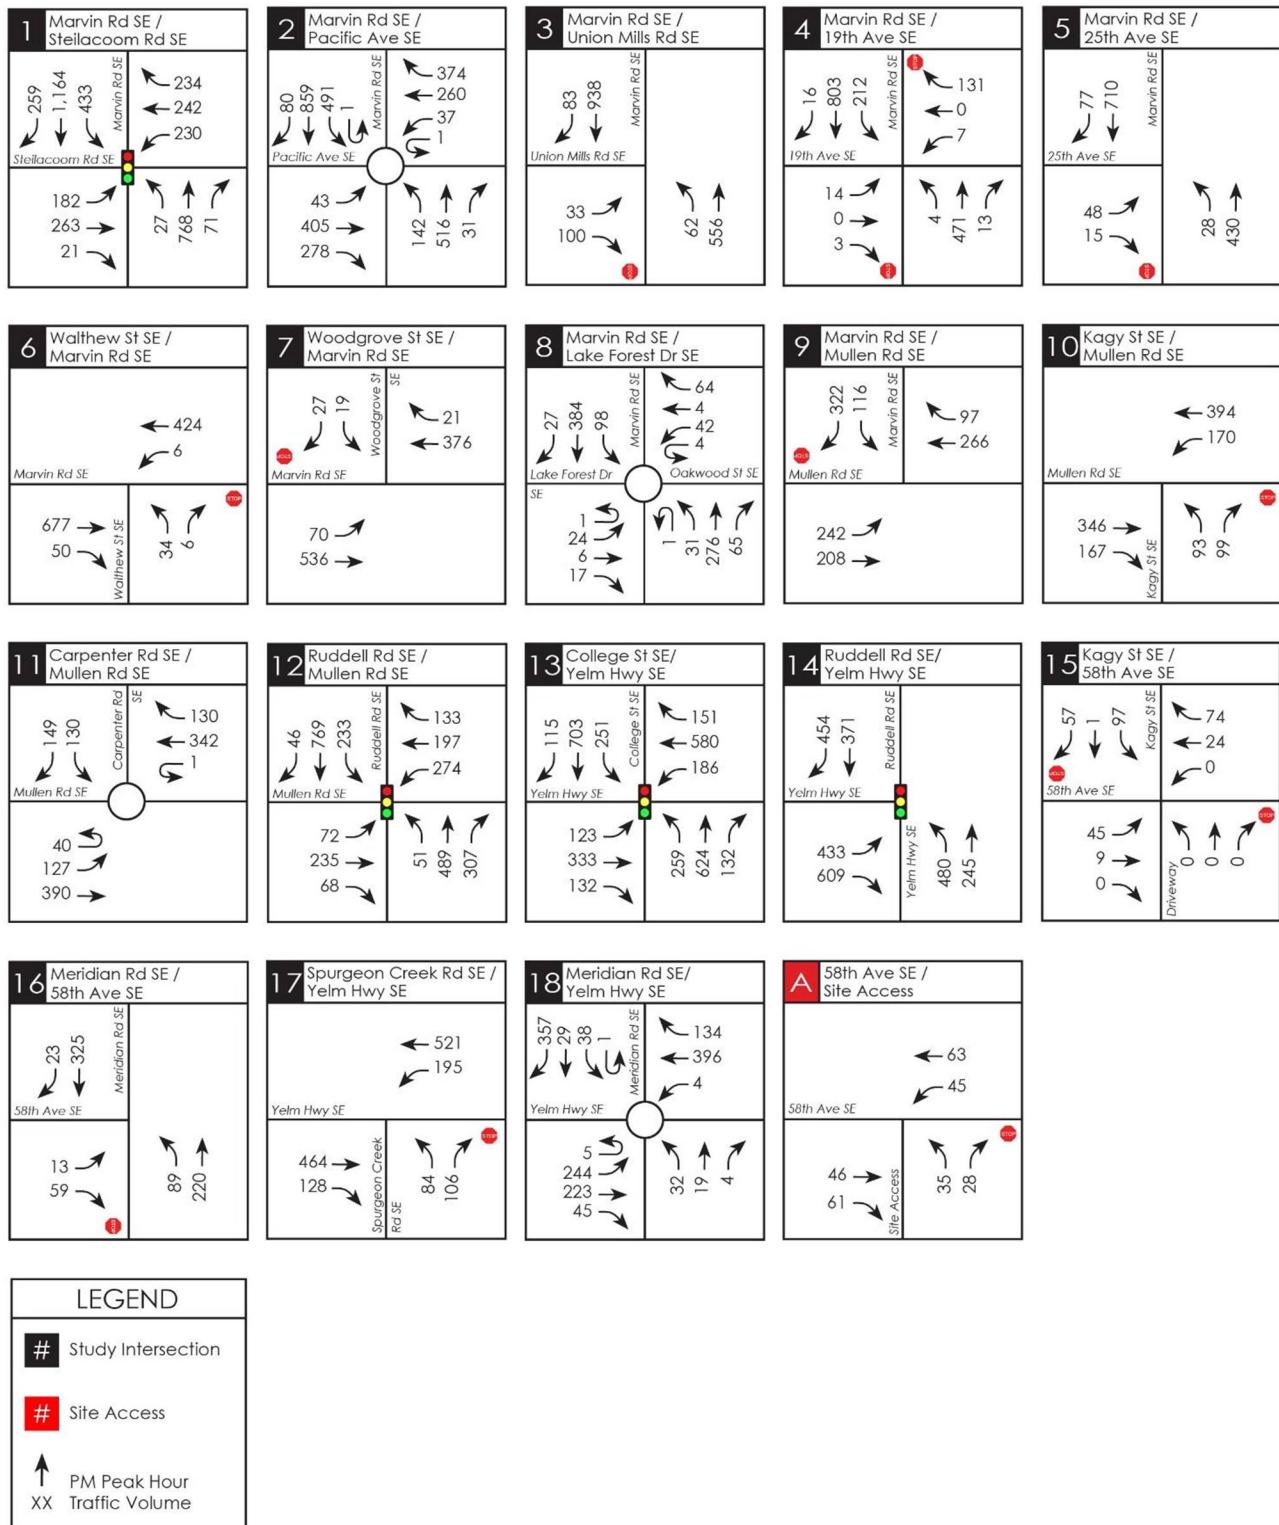

- Marvin Rd Extension: This project is a feasibility study for extending Marvin Road south to Yelm Highway, including identification of appropriate configuration and alignment. The City will support Thurston County for their project.
- Mullen Rd Enhancements from Rumac Rd SE to Kagy St SE: This project will extend the enhancements completed along Mullen Rd between Ruddell Rd and Timberline High School further east to Afflerbaugh Dr. The enhanced roadway section is a major collector with medians, bike lanes, planter strips, and sidewalks. This project is expected to eventually extend to Meridian Rd. The City will support Thurston County for their portion of the project. The project timeline is currently unknown.
- Marvin Rd Corridor Improvements (Thurston County): This project will improve several intersections and segments of Marvin Rd between Pacific Ave SE and Mullen Rd SE. Segment improvements include providing 2 to 3 lanes, bike lanes, pedestrian refuge islands, planter strips, medians, sidewalks, lighting, and drainage. Intersection improvements include a new roundabout at Marvin Rd SE/Mullen Rd SE (study intersection #9), a new roundabout at Marvin Rd SE/19<sup>th</sup> Ave SE (study intersection #4), and access control at Marvin Rd SE/Union Mills Rd SE (study intersection #3). The project is anticipated to be implemented by the County or other development and the timeline for these improvements is currently unknown.
- Spurgeon Creek Rd SE/Yelm Hwy Improvements (Thurston County): This project will construct a new roundabout at the intersection. The project is anticipated to start in 2024 and is currently not fully funded.
- Steilacoom Rd Improvements (Thurston County): This project will improve Steilacoom Rd between Pacific Ave SE to SR 510 which would include widening, pavement rehabilitation, bike lanes, sidewalks, lighting, and drainage. A traffic alternatives study is also planned to determine future intersection improvements at Pacific Ave SE/Steilacoom Rd SE/Union Mills Rd SE. This project is currently not fully funded.
- Kagy St SE/Mullen Rd SE Improvement: The Manor House residential project will provide a refuge lane for northbound left-turning vehicle. The timeline for this improvement is currently unknown.

**Figure 4:** Weekday PM Peak Hour Project Trip Assignment

**Figure 5:** 2025 No Action Weekday PM Peak Hour Traffic Volumes

**Figure 6:** 2025 With Project Weekday PM Peak Hour Traffic Volumes

## 7. Traffic Operations with Project Buildout

Weekday PM peak hour level of service (LOS) analyses were conducted at the 18 off-site study intersections for three scenarios: (1) 2023 Existing, (2) 2025 No Action (without project), and (3) 2025 With Project.

Level of service calculations were based on the use of *Synchro 11* traffic analysis software for signalized intersections, stop-controlled intersections, and single-lane roundabouts, and *Sidra 9* traffic analysis software for multilane roundabouts. The LOS methodology is included in [Appendix F](#).

The City of Lacey, Thurston County, and WSDOT intersection LOS standard is LOS D for the study area. It should be noted that the following study intersections are located on one of the City of Lacey or Thurston County *Strategy Corridors*, which are exempt from LOS standards.

- #1) Marvin Rd SE/Steilacoom Rd SE
- #2) Marvin Rd SE/Pacific Ave SE
- #13) College St SE/Yelm Hwy SE
- #14) Ruddell Rd SE/Yelm Hwy SE
- #18) Meridian Rd SE/Yelm Hwy SE

The 2023 existing weekday PM peak hour LOS analysis results are summarized in [Table 2](#). [Table 3](#) summarizes the future 2025 weekday PM peak hour LOS without and with full buildout of the proposed Aurora Oaks development. Detailed LOS worksheets are provided in [Appendix F](#).

1. LOS = Level of Service, reported as intersection average and by movement for stop-controlled intersections and roundabouts.

2. Intersection is part of a Strategy Corridor as defined by the City of Lacey or Thurston County.

The results of the LOS analyses shown in Table 3 indicate that 11 of the 18 study intersections are anticipated to operate at LOS D or better during the weekday PM peak hour in 2025 with full buildup of the proposed Aurora Oaks development. The following intersections are anticipated to operate below City of Lacey/Thurston County standards:

Intersections located on City of Lacey/Thurston County Strategy Corridors:

The following intersections are anticipated to operate at LOS E/F in 2025 during the weekday PM peak hour with full buildup of the proposed Aurora Oaks development but are located on City of Lacey or Thurston County Strategy Corridors and are therefore exempt from LOS standards:

1. Marvin Rd SE/Steilacoom Rd SE
13. College St SE/Yelm Hwy SE
14. Ruddell Rd SE/Yelm Hwy SE

Intersections with Future Planned Improvements:

The following intersections are anticipated to operate at LOS E/F in 2025 during the weekday PM peak hour with full buildup of the proposed Aurora Oaks development and include future planned improvements that are expected to result in acceptable LOS. No mitigation is proposed at these intersections.

3. Marvin Rd SE/Union Mills Rd SE – As part of the Oak Tree Preserve development, new c-curb will be installed on Marvin Rd SE to prohibit left-turns from Union Mills Rd SE.

4. Marvin Rd SE/19<sup>th</sup> Ave SE – As part of the Oak Tree Preserve development, this intersection will be signalized and provide a southbound to northbound U-turn for vehicles destined to the north on Marvin Rd SE from Union Mills Rd SE.
9. Marvin Rd SE/Mullen Rd SE – As part of the Oak Tree Preserve development, a roundabout will be constructed at this location.
10. Kagy St SE/Mullen Rd SE – The approved Manor House residential project will provide a refuge lane for northbound left-turning vehicles which would result in acceptable LOS.

## 8. Access Management

Vehicular access to the Aurora Oaks project is proposed via a new road that will intersect with 58<sup>th</sup> Ave SE. Weekday PM peak hour LOS and queues were evaluated at the proposed site access location. The 2025 weekday PM peak hour traffic volumes at the proposed site access location are shown below.

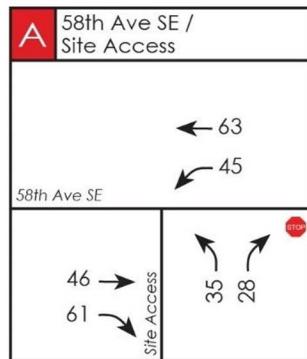

Table 4 summarizes the LOS and queue results at the site access location for future 2025 With Project conditions during the weekday PM peak hour.

**Table 4**  
**Site Access PM Peak Hour LOS and Queue Summary**

Site Access / Movement	LOS	Delay (sec)	95 <sup>th</sup> % Queue (ft)
<b>A. Site Access/58<sup>th</sup> Ave SE</b>			
Northbound Shared Left-Right (exiting trips)	A	9.9	< 25 ft
Westbound Left-Turn (entering trips)	A	7.6	< 25 ft

As shown in Table 4, the individual movements at the proposed site access location are anticipated to operate at LOS A during the PM peak hour in 2025 with the proposed project. Additionally, 95<sup>th</sup>-percentile queues for movements entering and exiting the site are estimated to be 25 feet or less at the proposed site access location.

The new site access intersection onto 58<sup>th</sup> Ave SE is located approximately 550 feet to the east of the existing Kagy St SE/58<sup>th</sup> Ave SE intersection, meeting the City of Lacey's spacing requirement of 330 feet for a collector roadway.

## 9. Traffic Calming

City development guidelines require that internal traffic calming be incorporated into all developments to control cut-through traffic and reduce speed within the development. As directed by County staff during the traffic scoping process, a vehicular connection from the proposed Aurora Oaks project south to Waldon Drive SE is not required and not desired. Since the project is only proposing access to 58<sup>th</sup> Ave SE, cut-through traffic is not anticipated to be a concern within the proposed Aurora Oaks project.

It should also be noted that a non-motorized and emergency access only connection between Aurora Oaks and Waldon Drive SE will be created to allow pedestrians and bicycles access between the two neighborhoods.

## 10. Alternate Modes of Transportation

The City of Lacey TIA guidelines encourages alternate modes of transportation. New developments are encouraged to implement Transportation Demand Management (TDM) practices. Sidewalks are proposed on the internal site roadways and will be included on the south side of 58<sup>th</sup> Ave SE as part of the required frontage improvements.

Additionally, a new non-motorized and emergency access only connection between Aurora Oaks and Waldon Drive SE will be created to allow pedestrians and bicycles access between the two neighborhoods.

## 11. Mitigation

The following measures have been identified to mitigate the transportation impacts of the proposed Aurora Oaks development.

- **Lacey Impact Fees.** To mitigate impacts to City of Lacey roads, payment of a transportation mitigation cost is required. The mitigation cost calculation will be determined by the City of Lacey Transportation Department and based on the number of PM peak hour trips generated by the final unit count affecting the current City TIP project list.
- **Thurston County Impact Fees.** To mitigate impacts to Thurston County roads, payment of a transportation impact fee is required. The transportation impact fee is based on the type of land use and the size of the development. Based on the current *Thurston County 2023 Transportation Impact Fee Rate Schedule*, the County collects \$3,191 per single-family dwelling unit in Central Urban Growth Areas. Impact fees will be based on the final unit count.
- **Level of Service Deficiencies.** Based on the results of the LOS analysis, all study intersections anticipated to operate at LOS E/F are either located on City of Lacey or Thurston County Strategy Corridors or have future planned improvements that are anticipated to result in acceptable LOS. Therefore, no mitigation is proposed at these intersections.

SUBJECT: **Aurora Oaks, Folder Sequence#23-101520**  
**Project #: 2023100588**  
**TRAFFIC SCOPING REVIEW**

REFERENCE: Traffic Scoping Memo – Dated 1-27-23

Dear Mr. Steepy:

Upon review of the proposed project referenced above, Public Works has the following comments:

1. The City of Lacey has requested the following intersections be included in the TIA
  1. Marvin Rd SE/Steilacoom Rd SE
  2. Carpenter Rd SE/Mullen Rd SE
  3. Ruddell Rd SE/Mullen Rd SE
  4. Ruddell Rd SE/Yelm Hwy SE
  5. College St SE/Yelm Hwy SE
2. The County would like the following intersections to be included in the TIA
  1. Marvin Rd SE / Mullen Rd SE
  2. Marvin Rd SE / Lake Forest Dr SE
  3. Marvin Rd SE / 19th Ave SE
  4. Marvin Rd SE / Union Mills Rd SE
  5. Marvin Rd SE / Pacific Ave SE
  6. Kagy Street SE / Mullen Rd SE
  7. Kagy Street SE / 58th Ave SE
  8. Meridian Rd SE/58th Ave SE
  9. Meridian Rd SE/Yelm Hwy SE
  10. Spurgeon Creek Rd SE/Yelm Hwy SE
  11. Marvin Rd SE/ 25<sup>th</sup> Ave SE
  12. Marvin Rd SE/ Walthew St SE

13. Marvin Rd SE/ Woodgrove St SE

Please be aware, further issues may be addressed as discovered, or as changes are made to the plans.

If you have any questions or comments, please call me at (360) 867-2043.

Sincerely,

Arthur Saint, PE  
Thurston County Public Works  
Development Review Section

## Appendix F

Level of Service (LOS) Methodology and Calculations

## Level of Service Methodology

Level of Service (LOS) generally refers to the degree of congestion at an intersection. It is a measure of vehicle operating speed, travel time, travel delays, and driving comfort. A letter scale from A to F generally describes intersection LOS.

Signalized Intersection LOS represents the average control delay (sec/veh) and can be reported for the overall intersection, for each approach, and for each lane group (additional v/c ratio criteria apply to lane group LOS only). The table below outlines the HCM (6<sup>th</sup> Edition) LOS criteria for signalized intersections.

### LOS Criteria for Signalized Intersections <sup>1</sup>

Control Delay (sec/veh)	Level of Service <sup>2</sup>	General Description <sup>3</sup>
≤ 10	A	Exceptionally Favorable Progression (or very short cycle lengths) – Most vehicles arrive during the green indication and travel through the intersection without stopping.
> 10 to ≤ 20	B	Highly Favorable Progression (or short cycle lengths) – While more vehicles than LOS A stop, most vehicles still pass through the intersection without stopping.
> 20 to ≤ 35	C	Favorable Progression (or moderate cycle lengths) – Individual cycle failures begin to appear, but many vehicles still pass through the intersection without stopping.
> 35 to ≤ 55	D	Ineffective Progression (or long cycle lengths) – Many vehicles stop and individual cycle failures are noticeable.
> 55 to ≤ 80	E	Unfavorable Progression (and long cycle lengths) – Individual cycle failures are frequent.
> 80	F	Very Poor Progression (and long cycle lengths) – Most cycles fail to clear the queue at this level.

1 Source: Highway Capacity Manual 6<sup>th</sup> Edition, Transportation Research Board, 2016.

2 If the volume-to-capacity (v/c) ratio for a lane group exceeds 1.0, LOS F is assigned to the individual lane group. For approach-based and intersection-wide assessments at signals, LOS is defined solely by control delay.

3 Individual cycle failures: one or more queued vehicles are not able to depart as a result of insufficient capacity during the cycle.

Synchro 11 and/or HCM 2000 LOS methodology may be used when HCM 6<sup>th</sup> Edition methodology is not supported at an intersection (i.e., intersection geometry and/or custom phasing) or jurisdictional standards require use of an alternative methodology.

Unsignalized Intersection LOS (two-way stop control, all-way stop control, and roundabouts) is based on the average control delay. For two-way stop-controlled intersections, the LOS criteria apply to each controlled minor-street approach, controlled minor-street lane group, and controlled major-street movement (additional v/c ratio criteria apply to lane group LOS only). LOS is not calculated for major-street approaches or for the intersection as a whole at two-way stop-controlled intersections. For all-way stop-controlled intersections and roundabouts, LOS can be reported for the overall intersection, for each approach, and for each lane group (additional v/c ratio criteria apply to lane group LOS only). The table below outlines the HCM (6<sup>th</sup> Edition) LOS criteria for unsignalized intersections based on these methodologies.

### LOS Criteria for Unsignalized Intersections <sup>1</sup>

Control Delay (sec/veh)	Level of Service <sup>2</sup>
≤ 10	A
> 10 to ≤ 15	B
> 15 to ≤ 25	C
> 25 to ≤ 35	D
> 35 to ≤ 50	E
> 50	F

1 Source: Highway Capacity Manual 6<sup>th</sup> Edition, Transportation Research Board, 2016.

2 If the volume-to-capacity (v/c) ratio for a lane group exceeds 1.0, LOS F is assigned to the individual lane group. For approach-based and intersection-wide assessments at unsignalized intersections, LOS is defined solely by control delay.

# LANE LEVEL OF SERVICE

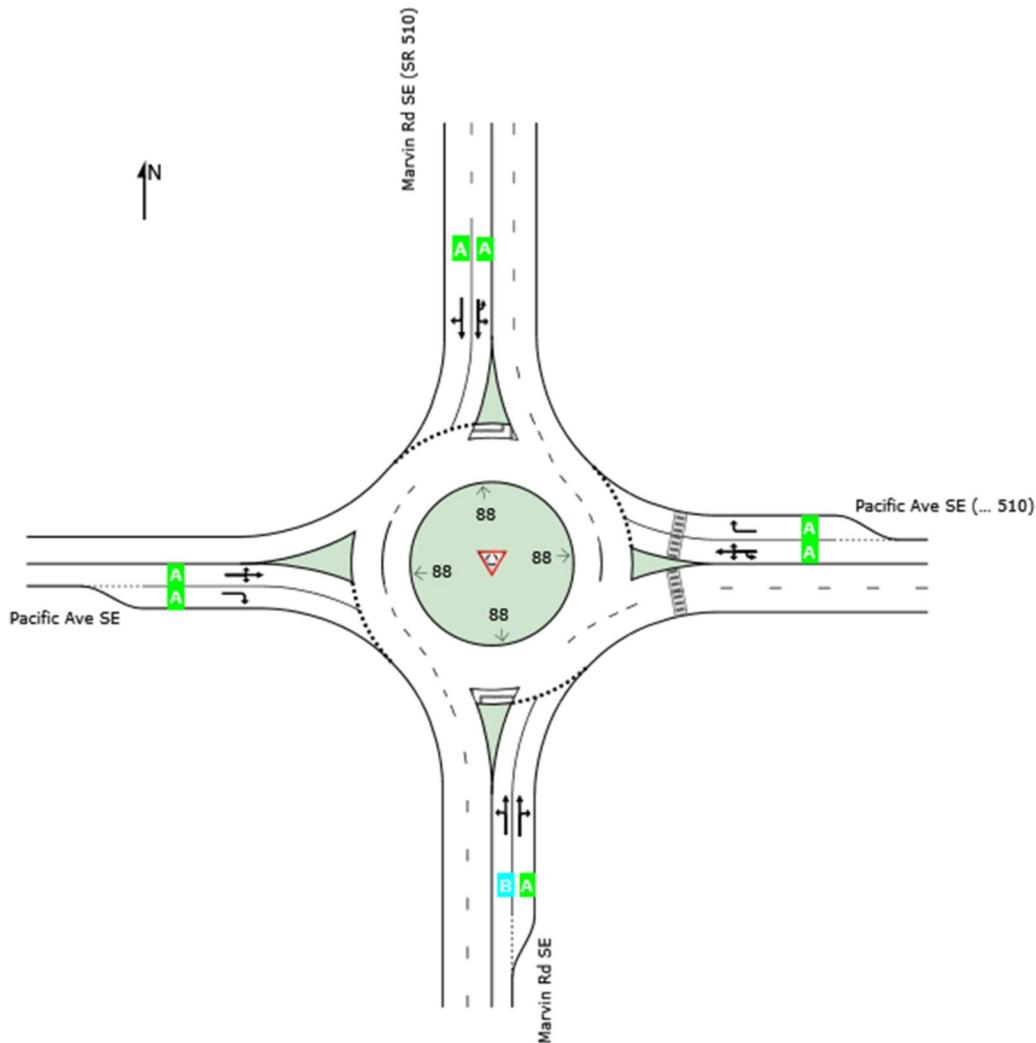

## Lane Level of Service

Site: 2 [Marvin Rd SE / Pacific Ave SE (Site Folder: 2023 Existing - PM Peak Hour)]

Output produced by SIDRA INTERSECTION Version: 9.1.3.210

Aurora Oaks  
Marvin Rd SE & Pacific Hwy SE  
Site Category: (None)  
Roundabout

	Approaches				Intersection
	South	East	North	West	
LOS	A	A	A	A	A

Site Level of Service (LOS) Method: Delay & Degree of Saturation (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Options tab).

Roundabout LOS Method: Same as Signalled Intersections.

Lane LOS values are based on average delay and v/c ratio (degree of saturation) per lane.

Intersection and Approach LOS values are based on average delay for all lanes (v/c not used).

Delay Model: SIDRA Standard (Control Delay: Geometric Delay is included).

Site Level of Service (LOS) Method: Delay & Degree of Saturation (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Options tab).

Roundabout LOS Method: Same as Signalised Intersections.

Vehicle movement LOS values are based on average delay and v/c ratio (degree of saturation) per movement.

Intersection and Approach LOS values are based on average delay for all movements (v/c not used).

Roundabout Capacity Model: SIDRA HCM.

Delay Model: SIDRA Standard (Control Delay: Geometric Delay is included).

Queue Model: SIDRA queue estimation methods are used for Back of Queue and Queue at Start of Gap.

Gap-Acceptance Capacity Formula: SIDRA Standard (Akçelik M3D).

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Arrival Flows used in performance calculations are adjusted to include any Initial Queued Demand and Upstream Capacity Constraint effects.

## Intersection Summary

HCM 6th Ctrl Delay                            131.8  
HCM 6th LOS                                    F

## Notes

User approved pedestrian interval to be less than phase max green.

# LANE LEVEL OF SERVICE

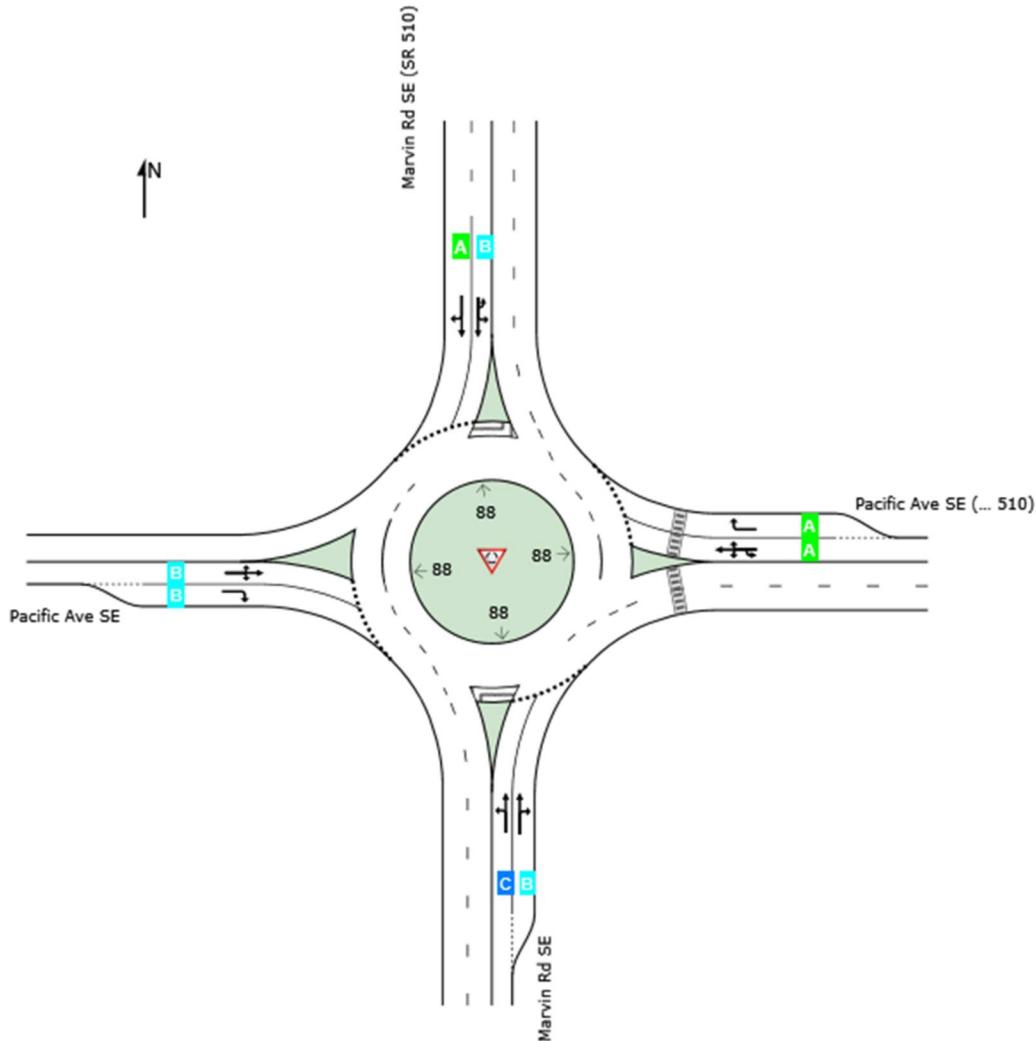

## Lane Level of Service

Site: 2 [Marvin Rd SE / Pacific Ave SE (Site Folder: 2025 No Action - PM Peak Hour)]

Output produced by SIDRA INTERSECTION Version: 9.1.3.210

Aurora Oaks  
Marvin Rd SE & Pacific Hwy SE  
Site Category: (None)  
Roundabout

	Approaches				Intersection
	South	East	North	West	
LOS	B	A	B	B	B

Site Level of Service (LOS) Method: Delay & Degree of Saturation (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Options tab).

Roundabout LOS Method: Same as Signalled Intersections.

Lane LOS values are based on average delay and v/c ratio (degree of saturation) per lane.

Intersection and Approach LOS values are based on average delay for all lanes (v/c not used).

Delay Model: SIDRA Standard (Control Delay: Geometric Delay is included).

Site Level of Service (LOS) Method: Delay & Degree of Saturation (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Options tab).

Roundabout LOS Method: Same as Signalised Intersections.

Vehicle movement LOS values are based on average delay and v/c ratio (degree of saturation) per movement.

Intersection and Approach LOS values are based on average delay for all movements (v/c not used).

Roundabout Capacity Model: SIDRA HCM.

Delay Model: SIDRA Standard (Control Delay: Geometric Delay is included).

Queue Model: SIDRA queue estimation methods are used for Back of Queue and Queue at Start of Gap.

Gap-Acceptance Capacity Formula: SIDRA Standard (Akçelik M3D).

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Arrival Flows used in performance calculations are adjusted to include any Initial Queued Demand and Upstream Capacity Constraint effects.

# LANE LEVEL OF SERVICE

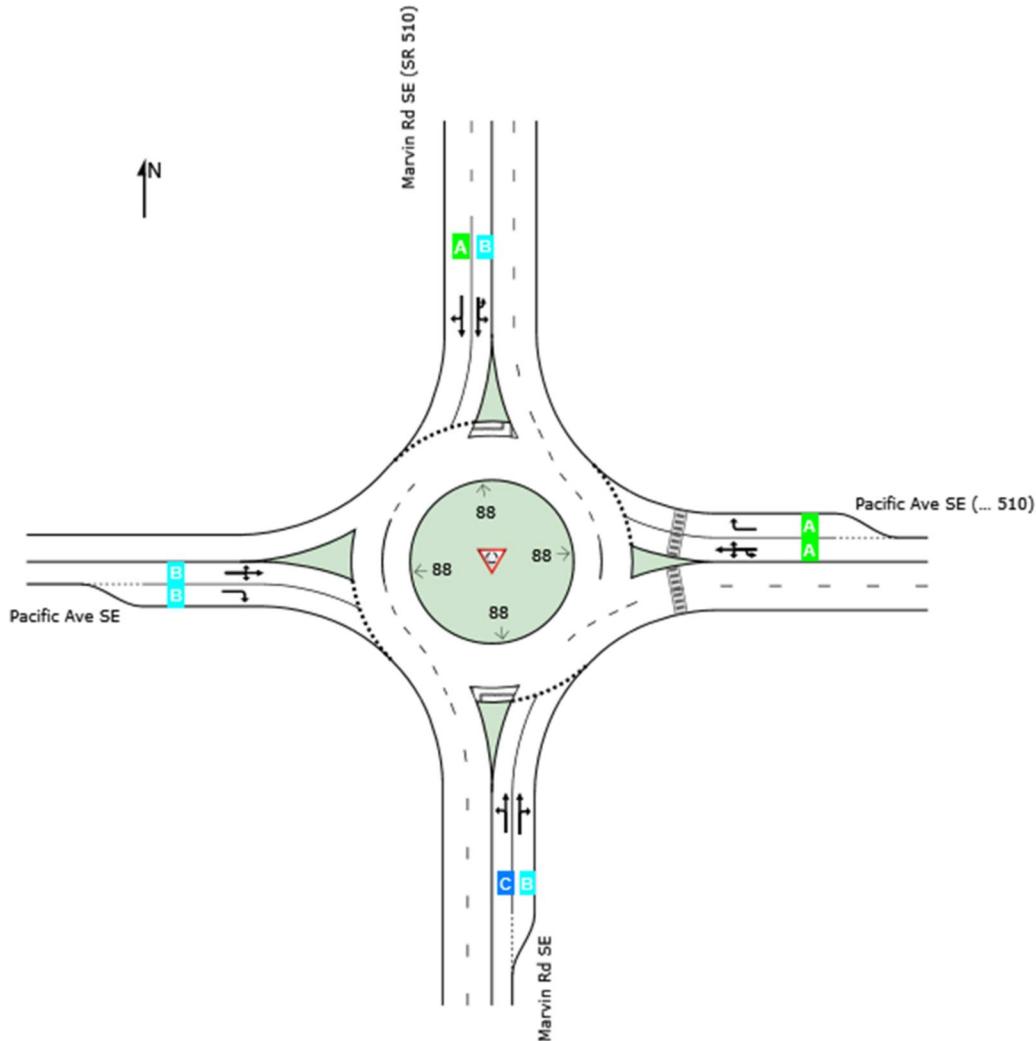

## Lane Level of Service

Site: 2 [Marvin Rd SE / Pacific Ave SE (Site Folder: 2025 With Project - PM Peak Hour)]

Output produced by SIDRA INTERSECTION Version: 9.1.3.210

Aurora Oaks  
Marvin Rd SE & Pacific Hwy SE  
Site Category: (None)  
Roundabout

	Approaches				Intersection
	South	East	North	West	
LOS	B	A	B	B	B

Site Level of Service (LOS) Method: Delay & Degree of Saturation (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Options tab).

Roundabout LOS Method: Same as Signalled Intersections.

Lane LOS values are based on average delay and v/c ratio (degree of saturation) per lane.

Intersection and Approach LOS values are based on average delay for all lanes (v/c not used).

Delay Model: SIDRA Standard (Control Delay: Geometric Delay is included).

## MOVEMENT SUMMARY

Site Level of Service (LOS) Method: Delay & Degree of Saturation (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Options tab).

Roundabout LOS Method: Same as Signalised Intersections.

Vehicle movement LOS values are based on average delay and v/c ratio (degree of saturation) per movement.

Intersection and Approach LOS values are based on average delay for all movements (v/c not used).

Roundabout Capacity Model: SIDRA HCM.

Delay Model: SIDRA Standard (Control Delay: Geometric Delay is included).

Queue Model: SIDRA queue estimation methods are used for Back of Queue and Queue at Start of Gap.

Gap-Acceptance Capacity Formula: SIDRA Standard (Akçelik M3D).

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Arrival Flows used in performance calculations are adjusted to include any Initial Queued Demand and Upstream Capacity Constraint effects.
