Map 8: Urban Area Septic System Analysis

- Septic System Analysis Area
- Deschutes Project Study Area

The purpose of the Urban Septic System Analysis and “risk” ranking project was to identify areas within the urban area where septic systems pose a threat to public health and water resources. The criteria used to evaluate risk were the following:

- 1) Septic system densities, represented by equivalent residential units per acre
- 2) Soil conditions conducive to either surfacing sewage failures or contamination of ground water, and
- 3) Proximity of septic systems to water resources, surface waters and drainages discharging to surface water or public drinking water wells.
