Stormwater Conveyance System Connection Application

Purpose:

This application was created in order to meet federal and state requirements, including the National Pollutant Discharge Elimination System (NPDES Phase II) permit conditions S5.C3, issued by the Washington State Department of Ecology (DOE) and County Code (Section 15.07) Illicit Discharge Detection and Elimination Ordinance.

Instructions:

Use the attached form only for connections to Thurston County Municipal Stormwater facilities. Submit original signed forms, complete all information or indicate non-applicability, submit a copy of a location map, plot plan, direct connection details and supporting documentation such as plans and profiles, design report, maintenance plan, operations plan, source control plans, downstream analysis, Agreement to Maintain, etc, which will describe the project more adequately.

General Conditions:

Adequacy of Design – The schedules, plans, specifications and all other data and documents submitted for this authorization are made a part hereof. The responsibility for the adequacy of the design shall rest solely with the Design Engineer and the issuing of this authorization shall not relieve him of that responsibility. The issuance of this authorization shall not be construed as approval of the concept or construction details of the proposed facilities and shall not absolve the Applicant or Design Engineer of their respective responsibilities.

Allowable Discharges – Discharges into the stormwater system under this authorization shall consist of stormwater only unless otherwise allowed in Thurston County Code 15.07.

Maintenance – The storm sewer connections, lines, systems or facilities authorized shall be properly maintained and operated at all times in accordance with all applicable requirements. It is understood that the responsibility for maintenance shall run as a joint and several obligation against the property served, the owner and/or the operator of the facilities, and said responsibility shall not be discharged nor in any way affected by change of ownership of said property.

As a condition of approval, the Owner may be required to sign and record against the underlying property an “Agreement to Maintain Stormwater Facilities and Implement a Pollution Source Control Plan” (Agreement). A modified version of the agreement has recently been developed and is posted to the Thurston County stormwater web-site. The modified version should be used instead of the version contained within the DDECM, Appendix I-E.

Costs. It is expressly stipulated and clearly understood that the stormwater system or facilities for which the authorization is issued shall be constructed, operated and maintained at no cost to the COUNTY.

Change of Use. The owner or occupant of any property served under this authorization shall not cause, or permit, a change of use of the property to a use other than that indicated in this Authorization without first having obtained a written consent of the Director authorized to implement and enforce it.

Stormwater Utility
An Accredited Agency of the
American Public Works Association

Termination. It is understood and agreed that in the event the Owner shall default in or fail to perform or carry out any of the covenants, conditions and provisions of this authorization and such default or violation shall continue for sixty (60) days after receipt of notice thereof in writing given by the Director, then it shall be lawful for the COUNTY at or after the expiration date of sixty (60) days to declare said authorization terminated. The Owner agrees that immediately upon receipt of written notice of such termination it will stop all operations, discontinue any discharges and disconnect the stormwater system or facilities connected under this authorization. If the Owner fails to do so, the COUNTY shall have the right to disconnect said system. The Owner hereby agrees to pay for any costs incurred by the COUNTY for said disconnection. The various rights and remedies of the COUNTY contained in this authorization shall be construed as cumulative, and no one of them shall be construed as exclusive of any one or more of the others or exclusive of any other rights or remedies allowed by applicable rules, regulations, ordinances and laws. An election by the COUNTY to enforce any one or more of its rights or remedies shall not be construed as a waiver of the rights of the COUNTY to pursue any other rights or remedies provided under the terms and provisions of this authorization or under any applicable rules, regulations, ordinances or laws.

Revocation. In issuing this authorization, the COUNTY has relied upon the statements and representations made by the Owner or his agent. Any incorrect statements or representations shall be cause for revocation of this authorization, and all the rights of the Owner hereunder shall immediately become null and void.

Compliance with Plans and Specifications. Connections shall be in accordance with the plans and specifications submitted for this authorization and made a part hereof. No changes in, or deviation from the plans and specifications which affect capacity, maintenance, design requirements, service area or the requirements hereof shall be permitted unless revised plans shall have been submitted to, and approved by, the COUNTY.

Testing and Approval. All connections under this authorization shall be subject to inspection, testing and approval by the COUNTY. All testing shall be made, or caused to be made, by the Owner at no cost to the COUNTY and in the presence of the COUNTY representative. No connection to the stormwater system or other facilities shall be put in service until all the conditions of the authorization have been satisfactorily met.

Compliance with Rules and Regulations. The Owner hereby expressly assumes all responsibilities for meeting the requirements of all applicable rules, regulations, ordinances and laws of local, State and Federal authorities. Issuance of this authorization shall not constitute a waiver of any applicable requirements.
