

Scheduling and Time Management System Question and Answers

Q - I have another question about line item 754 on the Matrix which states: *“Does the proposed system provide native integration with Microsoft Office 365 for user authentication?”* Can you please expand on this further? Is the county using Active Directory, SAML, or Azure? If so, can you provide me more details? (version number, ect)

A - Thurston County employees use Office 365 for enterprise e-mail and calendaring services. Authentication is provided by Azure AD. The County wishes for the scheduling and time management solution to utilize Office 365 and Azure AD APIs as the authentication vehicle for logging users into the system.

Q - If there are answers that are marked “no” in the technical section, will we be disqualified immediately? There are large sections that will be marked this way and I don’t want that to come as a surprise. For price quotation purposes, can we provide pricing on Kronos normal pricing quotation documents vs within the County’s spreadsheet?

A - If there are answers marked “no” in the technical section, you would definitely NOT be disqualified. We will not be surprised if there is no solution provider that will be able to meet all requirements. Yes, we will accept pricing on Kronos normal pricing quotation documents. On the spreadsheet, in the appropriate locations, please state “see attached pricing quote” (or something similar).
